Never-ending nightmare : the neoliberal assault on democracy

London, UK: Verso, 2019.

Subjects: Democracy. Liberalism. Neoliberalism

Summary: This book explains that the neoliberal straitjacket has succeeded in preventing any course correction by progressively deactivating democracy. Increasing the disarray and demobilization, the so-called 'governmental' Left has actively helped strengthen this oligarchical logic. The latter could lead to a definitive exit from democracy in favour of expertocratic governance, free of any control. However, nothing has been decided yet. The revival of democratic activity, which we see emerging in the political movements and experiments of

recent years, is a sign that the political confrontation with the neoliberal system and the oligarchical bloc has already begun.

The cartoon introduction to calculus

New York, NY: Hill and Wang, 2019.

Subjects: Calculus—Caricatures and cartoons. Calculus—Humor.

Summary: A supplement to traditional textbooks, this book focuses on the big ideas rather than all the formulas you have to memorize. With the authors as our guides, we scale the dual peaks of Mount Derivative and Mount Integral, and from their summits, we see how calculus relates to the rest of mathematics. Beginning with the problems of speed and area, the authors show how the discipline is unified by a fundamental theorem. We meet geniuses like Archimedes, Liu Hui, and Bonaventura Cavalieri, who survived the slopes on intuition but prepared us for the avalanche-like dangers posed by mathematical rigor. Then we trek onward and scramble through limits and extreme values, optimization and integration, and learn how calculus can be applied to economics, physics, and so much more. We discover that calculus isn't the pinnacle of mathematics after all, but its tools are foundational to everything that follows. The authors round out the book with a handy glossary of symbols and terms, so you don't have to worry about mixing up constants and constraints.

When Chris Hadfield was a boy, growing up on a farm in Milton, Ontario, Canada didn't have a space program. But from the moment he saw a man first walk on the moon, young Chris decided he would somehow get to space. And with everything Chris did, from learning to fix farm machinery and joining the Air Cadets to flying fighter planes and becoming a test pilot, he prepared himself to get there. Chris Hadfield has rocketed into space three times, been on two space walks and was the first Canadian to command the International Space Station. And nobody plays a guitar in space better. This new picture book biography series features simple text and comicbook-flavoured illustration with speech balloons that help bring the story alive. Historical photos and timeline support the narrative.

In addition to provoking readers to honestly assess themselves, the author presents action steps for changing their approach in five key areas. O'Ree went on to play a total of 45 games with the Bruins, a remarkable achievement considering all he had to overcome to get there. He was often subjected to racism, bigotry and name-calling. He was blind in one eye — something he had to keep secret or he'd never play in the NHL. But thanks to his relentless positivity, perseverance and love of the game, Willie's time with the Bruins is only the beginning of his achievements in hockey. For the past twenty years he has served as the NHL's Director of Youth Development and ambassador for NHL diversity and is the leader of the "Hockey Is For Everyone" program — a title he still holds today. Finally, in January of 2018, he was inducted into the Hockey Hall of Fame.
